

Modul I - Product development with Solid Edge (ST 10)-

ÜBUNG 4: 3D-Design of a centering part

 Create the part pictured on the right.

Überblick:

The bolt should be created using the sequential procedure and the following functions:

- Ration
- Rotation extract
- chamfers
- AND operation
- cut out

Different construction strategies can be applied to this component.

Target:

In this exercise you will learn how to handle a rotationally symmetric component.

In addition, all production-relevant dimensions are parameterized.
